Technische Daten

Endless slewing mechanism

The endless slewing mechanism fitted as standard together with the slewing ring permits an unrestricted radius of action. As a result the crane works much more quickly and cost-efficiently.

Return oil utilisation

The high speed of the extension system is impressive. It results from return oil utilization feature, which is installed as standard, and the generously dimensioned hydraulic pipes. This makes for increased efficiency during all types of working!

Functional Design

- Enclosure of the entire electronic system
- Enclosure in the area of the control valve
- Enclosure of the hoses behind the crane column

Load-holding valves

They prevent the crane boom from dropping and are fitted as standard onto the slewing mechanism, elevating arm, and extension cylinders. The valves are positioned in such a way that they are protected from being damaged.

Central lubrication

For all grease points on the base frame.

Advanced Package

- Oil cooler installed
- Electronic HPLS (High Power Lifting System)
- PALFINGER radio remote control with LED display
- PALTRONIC 50
- Functional Design
- External 200 litre additional tank

Control valve

In combination with the PALFINGER radio remote control system the load-sensing proportional valve makes for highly sensitive crane control.

Technische Daten

Adjustable slide blocks

These ensure optimal lateral guidance of the extension system.

Power Link Plus

PALFINGER has specially developed this knuckle boom so that it can be tilted upwards by 15 degrees. It stands out by virtue of the excellent movement geometry. Even in the most restricted spaces, difficult crane jobs can be carried out with ease.

AOS

The Active Oscillation Suppression system, which is available exclusively from PALFINGER, compensates for jolts and sharp stress cycles caused by crane operation. Because oscillations are eradicated, the crane can work with pin-point accuracy much more quickly and therefore more cost-efficiently.

Hose equipment for accessories

With this option you can provide the oil supply to accessories. The hoses are routed in compact troughs and plastic link chains. They are therefore very well protected.

Extension system

- The extension cylinders are guided by using Jordal rails and rollers.
- Height compensation of the extension cylinders.

Outriggers

The 5.6 m hydraulic outrigger system installed as standard ensures good stability. As an option a 6.6 m telescopic outrigger is available. The pipework to the support cylinders is internally routed in the outriggers, providing a high level of protection from damage at all times. On request, the outriggers can be supplied with support cylinders that swivel up hydraulically through 180°.
